ABSTRACT

This publication provides basic descriptive information about the 100 largest school districts in the United States and its outlying areas. The information was provided by state education agencies about student membership, revenues, and expenditures. The 100 largest districts, representing fewer than 1% of the nation's school districts, serve about 23% of public school students and employ about 23% of public school teachers. Almost all of these districts encompass large cities, but only about half are confined to city limits. One-third of these districts are found in Florida, Texas, and California; and more than half of these large districts have minority enrollment of over 50%. In addition, schools in the 100 largest districts tend to be about 38% larger than the average American school. Information on school and student characteristics and school finances is presented in 10 basic tables. Three text tables establish a meaningful context for the information on the 100 school districts. Appendixes list the 500 largest school districts, and an alphabetical list of the 500 districts. (SLD)

Highlights

The information provided in this publication was reported by state education agency officials to the National Center for Education Statistics (NCES) for the Common Core of Data (CCD). It relates to student membership in public schools and school districts in the United States and outlying areas during the 1992–93 school year, revenues and expenditures for fiscal year 1992.

- The 100 largest public school districts, representing fewer than 1 percent of all school districts in the nation, were responsible for the education of about 23 percent of all public school students.

- The 100 largest districts employed about 23 percent of the nation's public school teachers, and accounted for 16.6 percent of all public schools and 19.6 percent of public high school graduates.

- Although almost all of these districts encompassed large cities, as indicated by the districts' names, only about half of the school districts were confined to the city limits.

- Three states, Florida, Texas, and California, accounted for about one-third of these districts.

- Ninety-five of the 100 largest districts reported racial/ethnic data. Among them, more than half (50) had over 50 percent minority enrollment. However, in 23 of the 95 districts no single racial/ethnic group comprised a majority of the student population.

- Schools in the 100 largest districts tended to be about 38 percent larger than the average American school and to have a slightly higher pupil-teacher ratio than schools in other school districts.

- Among the 20 largest districts, three have increased in size by 25 percent or more since 1987: Broward and Palm Beach Counties in Florida, and Clark County in Nevada. Conversely, Puerto Rico, Chicago, and Detroit have all experienced declines in membership.

- Current expenditures per pupil in the 100 largest school districts range from a low of $2,727 in the Granite School District (Utah) to a high of $9,760 in Newark, New Jersey Public Schools.

Acknowledgments

The authors gratefully acknowledge the comments and suggestions of the reviewers: Cecilia Ottinger of the Council of Great City Schools; Debbie Bowley of Market Data Retrieval; and Marilyn Binkley, Marilyn McMillen, Sharon Bobbitt, and Bill Sonnenberg of the National Center for Education Statistics. Special thanks are due to Valerie Martin and Carol Rohr of Pinkerton Computer Consultants for the creation and production of the tables and the graphic figures.

Introduction

This publication provides basic descriptive information about the 100 largest school districts in the United States and its outlying areas. Almost one in every four public school students in this nation is served by one of these largest districts. They are distinguished from smaller districts by characteristics in addition to sheer size, such as average and median school size, pupil-teacher ratios, number of high school graduates, number of pupils receiving special education services, and minority enrollment as a proportion of total enrollment. This information is found in the ten basic tables. Three text tables precede the basic tables for the purpose of establishing a meaningful context for the information on the 100 largest districts. Following the basic tables, appendix A lists the 500 largest school districts with some identifying information and basic statistical data. Appendix B is an alphabetical list of the 500 districts indicating their rank by size.

This is the sixth in the current series of reports on the largest school districts in the Nation. Previously published were *Characteristics of the 25 Most Populous Cities' School Systems and the 25 Largest Public Elementary and Secondary School Districts: Fall 1986*, released in September 1988; *Characteristics of the 55 Largest Public Elementary and Secondary School Districts in the United States: 1987-88*, published in May 1989; *Characteristics of the 100 Largest Public School Districts in the United States: 1988-89*, published in April 1991; *Characteristics of the 100 Largest Public School Districts in the United States: 1990-91*, published in April 1993; and *Characteristics of the 100 Largest Public School Districts in the United States: 1991-92*, published in May 1994. The latter report may be ordered from OERI's Information Office by telephone, toll-free, at 1-800-424-1616.

Overview of Largest Districts

In the 1992-93 school year there were 16,589 local education agencies in the United States and its outlying areas, 15,030 of which were categorized as "regular school districts." (The others were a variety of agencies providing specialized or cooperative educational services.)

The 100 largest school districts served 9,974,812 students, or about 23 percent of the total public elementary and secondary school population of over 43 million students in the more than 16,000 local education agencies (LEAs) in the Nation (table A). The largest school district in the country is the New York City Public Schools, with 983,971 students in 1,016 schools. The second largest is the Los Angeles Unified School District, with 639,781 students in 637 schools. The Puerto Rico Department of Education, with 637,034 students in 1,593 schools, is third in size (table 1). The 500 largest districts (about 3 percent of all school districts) serve 18,394,615 students, or about 42 percent of the total public elementary and secondary school student population in the United States (table A).

For a more comprehensive picture of the distribution of school districts of all sizes nationally and the numbers of students served, see table B or consult the related data sources listed at the end of the text.

Table A.--Totals of selected statistics for the nation (including outlying areas), the 100 largest, and the 500 largest school districts: School year 1992-93

Data Item	National total	100 largest districts		500 largest districts	
		Total	Percentage of national total	Total	Percentage of national total

Zero*	291	1.9	99.5	0	0.0	100.0	14,958	43,100,485
Not reported	72	0.5	100.0	---	---	100.0	15,030	43,100,485

--- Not applicable.
* Membership may be zero in two situations: where the school district does not operate schools but pays tuition for its students in a neighboring district, and where the district provides services for students who are accounted for in some other district(s). Agencies that are not locally operated or do not serve students directly are not included in this table.

Where Are the 100 Largest School Districts?

The District of Columbia, Hawaii, and Puerto Rico each have only one school district for the entire jurisdiction, and each is represented among the 100 largest districts. Alaska, Illinois, Indiana, Kansas, Kentucky, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New Mexico, Oklahoma, Oregon, Pennsylvania, Washington, and Wisconsin each have one district among the 100 largest. States with multiple districts among the 100 largest are Florida with 13; Texas with 13; California with 11; Georgia and Maryland with 5 each; Louisiana, Tennessee, and Virginia with 4 each; North Carolina, Ohio, and Utah with 3 each; and Alabama, Arizona, Colorado, Nevada, New York, and South Carolina with 2 each.

As expected, these 100 school districts tend to be in cities and counties having large populations, with administrative offices typically in large cities and their environs. Many of the districts are in states where school districts are coterminous with counties. The district names indicate that 51 of them are identified with cities, 38 with counties or parishes, and 11 with other jurisdictions. About 70 percent of these districts are located in coastal states, although several are located in the large cities of the north-central states.

How Do These Districts Compare With the Average School District?

General Characteristics

According to information submitted to the National Center for Education Statistics (NCES) by education officials in state education agencies, the average school district in America has about 5 schools, 140 teachers, and 2,618 students, with an average school size of about 505 students and a mean pupil-teacher ratio of 18.7 to 1 (table A). Among the 100 largest districts, the means are 143 schools, 5,237 teachers, and 99,748 students, yielding an average school size of about 697 and a pupil-teacher ratio of 19 to 1.

Nationally, the number of high school graduates per year as a percentage of total school membership is about 5 percent. For the 100 largest school districts the average is about 4.3 percent (table A).

Student Body Composition

A substantial number of these districts have a disproportionately high percentage of racial/ethnic minorities in their pupil population, compared with the average school district. Using school district data from the Office for Civil Rights, NCES estimates that the 100 largest districts, with about 23 percent of the nation's pupils, have slightly more than 40 percent of the 13.7 million minority students in the country.*

*The numbers of students in different racial/ethnic categories are reported on the school universe survey of the Common Core of Data (CCD), and these school-level numbers are then aggregated to the school district level. Although there were sufficient school-level data to calculate student racial/ethnic enrollment figures for 95 of the 100 largest school districts, reporting from schools in other districts was not complete enough to be able to calculate national distributions. National racial/ethnic data are therefore taken from the most currently available (fall, 1992) Office for Civil Rights (OCR) report. The OCR data show a national estimate of the total number of minority students in all the public school districts (13.7 million) and the percentage of minority students in each of the 100 largest districts. These figures were divided by national public school membership to get a percentage of minority students in the 100 largest districts compared with all minority students in the nation's public schools.

Among those 95 of the 100 largest districts for which school-level student racial/ethnic data are reported in CCD, some 45 districts report 50 percent or more of their students as white, non-Hispanic (table 9). Of these 45 districts, 17 report minority representation of less than 25 percent of their student body, and 11 of them have less than 20 percent minority students (table 8).

In 19 districts, half or more of the membership is black, non-Hispanic; 7 districts report that the majority of their students are Hispanic; and in one district, most of the students are Asian/Pacific Islanders. In 23 districts, no single racial/ethnic group comprises more than 50 percent of the student population (table 9).

Membership Trends

The largest school districts in the United States have for the most part remained relatively stable in size over the past 5 years, although there are some exceptions. When 1992-93 membership is compared with that of 1987-88 (table C):

- One district, Palm Beach County, Florida, has displaced Jefferson County (Louisville), Kentucky, from the list of the 20 largest districts by moving from its 1987-88 position as 23rd in size to 17th in 1992-93. Similarly, Orange County, Florida, has displaced Montgomery County, Maryland. Some other large districts in Florida (Dade County, Broward County) have also shown increases of greater than 19 percent in student membership, as has Clark County, Nevada.

- Some of the districts serving large cities have experienced some losses or remained essentially flat, with Detroit and Chicago registering declines and Baltimore showing a growth of less than one-half of one percent. Puerto Rico, not a city district, indicates a 5.3 percent loss over the 5-year period, as well.

- The 20 largest districts, in both years, have accounted for approximately 12 percent of the students in the Nation's public elementary and secondary schools. In the fall of 1987, these 20 districts enrolled 4,823,555 pupils out of a national total (including outlying areas) of 40,764,124. In 1992-93, they had 5,135,209 students out of 43,436,788.

Table C.--Membership trends in the 20 largest school districts in the United States: School years 1987-88 to 1992-93

1992 rank by size	Name of reporting district	State	1987 rank by size	1992 membership	1987 membership	Change: 1987 to 1992	Percentage change: 1987 to 1992

Methodology

The primary source of data for this report is the 1992-93 Common Core of Data (CCD). Information was reported to NCES by state education agencies in the spring of 1993. There are four CCD surveys collecting basic descriptive data on public education in the nation: nonfiscal data are gathered through the school ("Public School Universe" survey), local education agency ("Education Agency Universe" survey), and state forms ("State Nonfiscal Survey"); fiscal data are gathered at the state level by NCES and at the local level in the F-33 series of the Census of Local Governments by the Governments Division of the Bureau of the Census. All responses are provided by a CCD coordinator in each state education agency. The information for the tables is taken from the "Public School Universe" and the (local) "Education Agency Universe" collections. Since the information is supplied by state education agencies, any item of data missing for one school district is generally missing for other districts in the same state. For the calculation of national or subnational averages, data were obtained from the "State Nonfiscal Survey." Wherever this alternative source has been used, the information is footnoted or explained in the text.

Response Rates

Notwithstanding the item nonresponse situations cited below, most of these data represent school-district level figures. District level data were provided by all 50 states, the District of Columbia, and five outlying areas: American Samoa, Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the Virgin Islands.

Item Nonresponse

There were some items for which not all districts provided data. The following nonresponse situations in the CCD school and agency universe surveys relate to information presented in this report: No teacher counts—Massachusetts and Michigan; no high school graduate counts- Washington; no racial/ethnic counts—Georgia; no special education Individual Education Plan counts (or zero entered in every record)—Kentucky, Ohio, Pennsylvania, Puerto Rico, Tennessee, and Virginia; no Free Lunch Eligible Data—Alabama, Arizona, Illinois, Kentucky, Massachusetts, Missouri, New Mexico, New York, Pennsylvania, Tennessee, Virginia and Washington; no fiscal data—Puerto Rico.

Definitions

Current expenditures—Funds spent for operating local public schools, including such items as salaries for school personnel, student transportation, school books and materials, and energy costs, but excluding capital outlay and interest on school debt.

Graduates—Students who completed the course of public elementary and secondary education offered by the school district and received a regular high school diploma as defined by state law or policy during the period September 1991 through August 1992.

Per pupil expenditure—Total current expenditure for public elementary and secondary education in a state divided by the student membership. The numbers reported here, based on membership, can be expected to be smaller than per pupil expenditures based on average daily attendance, because the membership counts are generally larger than average daily attendance. As with pupil-teacher ratio, the average reported here does not reflect variations across school districts, grade levels, or programs.

Public school—An institution which provides educational services and has the following characteristics:

- Has one or more grade groups (prekindergarten through grade 12) or is ungraded;
- Has one or more teachers to give instruction;
- Is located in one or more buildings or sites;
- Has an assigned administrator;
- Receives public funds as primary support;
- Is operated by an education agency.

Pupil-teacher ratio—The ratio of pupils to teachers in a school district, based on the total number of pupils and the total full-time-equivalent (FTE) number of teachers reported in the schools associated with the school district.

Pupils in membership—Count of all students whose names have been entered on the roll, minus those whose names have been withdrawn, on or before the closest school day to October 1. Membership counts at the district level may include students for whom the district is providing educational services through some other agency or institution.

Regular school—A public elementary/secondary school that does not focus primarily on vocational, special, or alternative education.

Revenues—Additions to assets which do not incur an obligation that must be met at some future date, do not represent exchanges of fixed assets, and are available for expenditure by the local education agencies in the state. Revenues include funds from local, intermediate, state, and federal sources.

Schools having membership—Schools at which students are counted for administrative purposes, even though the students may attend one or more other schools for all or part of their school day.

Teachers—Sum of full-time-equivalent (FTE) count of teachers by school for all schools in a school district.

Basic Tables

Table 1 presents basic data—numbers of students receiving educational services, teachers, 1992 graduates, and schools—for each of the 100 largest districts. Also shown in table 1 is information to fully identify each school district, since the name of the district is not always sufficient for this purpose. On this and all the other tables, the districts are shown in decreasing order of size (pupils in membership as of October 1992). Since the districts are arrayed by number of pupils, it is easy to note the differences in the numbers of teachers, graduates, and schools as they relate to districts of similar size. For example, although the Puerto Rico Department of Education has fewer students than the Los Angeles Unified School District, it has more teachers and graduates. Palm Beach County, Florida, Public Schools, though smaller in size than Duval County School District, Florida, has more graduates.

Table 2 shows the number of schools in the 100 largest districts, by type of school. All but one of the districts have specialized schools devoted to special, vocational, or alternative education. The numbers of students assigned to these schools are given in table 3. It should be noted that students attending a specialized school are often counted at their nonspecialized (regular) home school rather than at the specialized school they attend. It can be seen from these tables that districts vary widely in their use of specialized versus general schools in educating students with special needs. The number of students having Individual Education Plans (IEP) in accordance with the Individuals with Disabilities Education Act-Part B, is shown in the last column of table 3.

Since pupil membership by grade is necessary for determining school categories in tables 4 through 9, only schools having membership, or *regular* schools having membership, as specified in table 5, are used in the data sets from which these tables are derived.

Table 4 provides information on school characteristics in the 100 districts by displaying an array showing school size (pupils in membership) at different percentile levels, as well as mean school size for each district (computed using regular schools having membership). According to this table, median school size ranges from a low of 335 pupils (St. Louis City) to a high of 1,234 (Gwinnett County, Georgia) for these districts. The largest school in these districts,- and also the largest school in the United States, is the 5,018–student G. Holmes Braddock Sr. High School in the Dade County School District, Florida. Looking more closely at Dade County, the table shows that 25 percent of the schools have a pupil membership of 651 or fewer, and another 25 percent have a membership of 1,255 or more. Dividing all the students in regular schools by the number of such schools yields a mean, or average, size of 1,093.7 students. If all the regular schools in Dade County were listed by size, the school at the mid-point on the list would have 918 pupils in membership. The median, therefore, is 918.

In table 5, data are given on the number of students assigned to graded (three categories) and ungraded classes. In accounting for their students, 45 of the 100 largest districts assign all students to numbered grades and 55 use the "ungraded" status for students in some settings,

such as special education, vocational education, and other specialized and alternative programs. In this table, students assigned to all types of schools are counted in the grade for which they are reported.

People frequently want to know how many "elementary schools" and "high schools" there are in any selection of school districts. Table 6 deals with these questions. Since nearly every conceivable grade span is found among the 14,000 plus schools in the 100 largest districts, the following four categories are used: primary (low grade of prekindergarten to 3; high grade up to 8), middle (low grade 4 to 7; high grade 4 to 9), high (low grade 7 to 12; high grade 12), and other (all other configurations). Although 91 of these school districts have some schools in the "other" category, only in the Puerto Rico school system is the *number* very high (221, or 14.1 percent). Several districts that have fewer pupils than Puerto Rico, however, have high *percentages* of schools in this category. Some districts in this group are Fort Worth ISD, Texas (15.3 percent); Northside ISD, Texas (12.9 percent); Volusia County, Florida (16.9 percent); and San Juan Unified, California (17.4 percent).

Table 7 shows median pupil-teacher ratios for the schools found in the categories established in table 6. Since teacher counts by school were not available for Detroit or Boston, no pupil-teacher ratio could be calculated for the schools in these districts. Among the 100 largest districts, the median pupil-teacher ratio for all schools in a district varied from 12.7:1 in Saint Louis, Missouri, to 28.0:1 in Santa Ana, California.

Table 8 gives the number of schools in each district in five categories of minority concentration, as well as the overall minority student percentage for each district as a whole. In this report, minority is defined as all other than white non-Hispanic. Among the 20 largest districts, it is not uncommon to have two-thirds or more of the schools with more than 60 percent minority membership. Table 8 shows that except for the Broward County School District, Florida, 9 of the 10 largest school districts have more than 75 percent minority students. For example, 88.4 percent of the City of Chicago School District's students are minorities. Racial/ethnic data by school were not available in CCD files for the school districts in Georgia. Data for Georgia were obtained from OCR.

Whereas table 8 dealt with the number of schools in each district having a strong minority presence of any kind, table 9 shows the percentage of students in the entire district by specific racial/ethnic category. The City of Chicago shows 56.2 percent non-Hispanic black students, 29.0 percent Hispanic students, and 11.6 non-hispanic white students. As in table 8, racial/ethnic data were not available for districts in some states. Table 9 also shows the number of students eligible for free lunch. Responses in this data category were available for 79 districts out of the 100 largest. Among these districts, the percentages of students eligible for free lunch under a Federal program range from 6.9 (Orange County, Florida) to 79.9 percent (San Antonio ISD, Texas).

Table 10, dealing with school district revenues and expenditures, is based on fiscal year 1992 local government financial data collected by the Governments Division of the U.S. Census Bureau. It indicates the amount of revenue received, by source—local, state, and Federal—and current expenditures for instruction and all other, plus current expenditures per

pupil in membership for the fiscal year in question. Among the 100 largest school districts, Newark, New Jersey, has the highest expenditure per pupil ($9,760), and Granite School District, Utah, the lowest ($2,727). Overall, table 10 shows five school districts with per pupil expenditure greater than $7,000 and five school districts with per pupil expenditure less than $3,000.

How to read this table: Using Dade County as an example, the table shows that 25 percent of the schools have a pupil membership of 651 or less, and another 25 percent have a membership of 1,255 or more. Dividing all the students in regular schools by the number of such schools yields a mean, or average, size of 1,093.7 students. If all the regular schools in Dade County were listed by size, the school at the mid-point on the list would have 918 pupils in membership. The median, therefore, is 918.
